

Wireless 300

Day or night, whether for your security or convenience it's good to know you and your family will be alerted to the presence of someone outside your home.

The Wireless 300 provides control of up to 12 detection devices protecting external areas of your home, securing motor vehicles, garden sheds, furniture, access doors and other valuables. Three audio alert tones provide area specific identification upon activation. Additional receivers are easily added to a system or simply move one receiver from room to room or into the garden. A hand held transmitter is also available as a personal alarm or can be used for gate/door entry control.

The Wireless 300 is also suitable for commercial applications including monitoring delivery bays, shop entry alerts, electronic door release and other similar use's.

Installation is simple and requires no specialist tools or skills.

Wireless 300

Scare away intruders with your own voice warning

The AL01 deters potential intruders and trespassers from proceeding further by emitting a 10-20 second voice warning when triggered. Powered by C-cell batteries the AL01 can easily be sited to protect vulnerable areas in and around the home or workplace, providing fixed or portable security.

The AL01 is supplied with two pre-recorded security warnings, alternative messages can be recorded onto the unit either electronically or simply by speaking into the on-board micro-phone. Installed in moments and requiring no special skills the AL01 provides the first line of defense against unwanted visitors or can operate as a safety or informational device in commercial and industrial locations.

Voice warning messages are available from the Optex website – www.optex-europe.com
